PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 1.5+ years of professional experience architecting and delivering scalable SaaS web applications using React.js, Django REST Framework, Python, JavaScript (ES6+), and REST API integration. Demonstrated expertise in role-based access control (RBAC), Stripe payment processing, and AI/ML-powered product development across live production environments. Adept at agile collaboration, code review, client communication, and translating business requirements into clean, maintainable code. Graduating BS Computer Science candidate with a CGPA of 3.73/4.00, seeking a Full-Stack or Software Engineer role to drive measurable product impact.

CORE COMPETENCIES

Frontend Development: React.js | JavaScript (ES6+) | HTML5 | CSS3 | Tailwind CSS | Bootstrap

Backend Development: Django REST Framework | Python | REST API Integration

Databases: MySQL | MongoDB

Tools & Platforms: Git | GitHub | Stripe API | Postman (API Testing)

Architecture & Patterns: Role-Based Access Control (RBAC) | Agile Methodology | SaaS Architecture

AI/ML Integration: AI-Powered Feature Development | Prompt Engineering | ML Product Integration

Professional Skills: Client Communication | Code Review | Problem-Solving | Team Collaboration

WORK EXPERIENCE

Associate Software Engineer
NeuroOceans.Ai — Lahore, Pakistan | August 2024 – Present

- Architect and ship multiple production SaaS applications end-to-end using React.js (frontend) and Django REST Framework (backend), accelerating feature delivery by collaborating within a 5-person cross-functional agile team.
- Integrate Stripe Payment API into 2 live SaaS platforms, implementing secure subscription billing and one-time payment workflows, directly enabling revenue generation for both products.
- Design and develop a role-based access control (RBAC) system for a hiring platform, managing distinct permission sets for 3 user roles (employers, candidates, admins) and reducing unauthorized access incidents to zero.
- Build and deploy AI/ML-powered features for 2 company products — an AI health supplement recommender and an AI accounting memo generator — reducing manual research time for end users by an estimated 60%.
- Maintain and review source code using Git and GitHub, managing feature branches, performing code reviews, and resolving merge conflicts to sustain zero-defect deployments across multiple sprints.
- Serve as primary technical point of contact for client communication, translating business requirements into scalable technical specifications and delivering projects on schedule.

Frontend Developer Intern
Stackup Solutions (Pvt.) — Lahore, Pakistan | October 2023 – November 2023

- Developed 10+ responsive, cross-browser-compatible web interfaces using HTML5, CSS3, JavaScript, and React.js, reducing reported UI bugs by 30% through consistent implementation of modern layout standards.
- Implemented modular UI layouts using CSS Flexbox, CSS Grid, and Bootstrap component libraries, cutting average page build time by 25% through reusable component design.
- Practiced professional client communication and agile collaboration workflows in a fast-paced agency environment, consistently delivering assigned tasks within sprint deadlines.

EDUCATION

Bachelor of Science, Computer Science — CGPA: 3.73 / 4.00
National College of Business Administration & Economics (NCBA&E;) — Lahore, Pakistan | October 2021 – July 2025

Intermediate Pre-Engineering — 1002 / 1100 (91%)
Punjab Group of Colleges, Muslim Town — Lahore, Pakistan | August 2019 – July 2021

PROJECTS

Flit — Job Portal & Hiring Platform
Stack: React.js | Django REST Framework | Stripe API | Role-Based Access Control (RBAC)

- Architected a full-stack hiring platform with RBAC for 3 user roles (employers, candidates, admins), enabling granular permission management across all platform modules.
- Designed and implemented a proprietary 'Work DNA' psychometric assessment system to improve candidate-to-project matching accuracy, increasing recruiter satisfaction with match quality.
- Integrated Stripe API for secure payment processing, supporting job listing subscriptions and featured placements, delivering a complete monetization layer for the platform.

Supplement.AI — AI Health Advisor
Stack: React.js | Django REST Framework | AI/ML Integration | REST API

- Developed an AI-driven SaaS platform that analyzes patient health profiles and delivers personalized supplement recommendations, reducing manual consultation time for practitioners.
- Optimized React component architecture and reusability across 15+ UI components, improving codebase maintainability and reducing new-feature development time by an estimated 20%.

GaapIQ — AI Accounting Memo Generator
Stack: React.js | Django REST Framework | AI/ML Integration | Stripe API

- Built a web application that auto-generates GAAP-compliant accounting memos for U.S. businesses with AI-sourced citations from authoritative accounting literature, reducing memo drafting time by up to 70%.
- Integrated Stripe billing for premium plan access and engineered a multi-memo batch generation workflow, enabling processing of 10+ memos per session for enterprise users.
